
**GUIDELINE LEVELS FOR VINYL CHLORIDE MONOMER AND
ACRYLONITRILE IN FOOD AND PACKAGING MATERIAL**

CAC/GL 6-1991

Guideline Levels for Vinyl Chloride Monomer and Acrylonitrile in Food and Packaging Material were adopted by the Commission at its Nineteenth Session (1991) on the understanding that the Association of Official Analytical Chemists (AOAC) and the International Organization for Standardization (ISO) would develop appropriate sampling plans and methods of analysis.

Guideline level

Vinyl chloride monomer

Guideline level in food 0.01 mg/kg

Guideline level in food packaging material 1.0 mg/kg

Acrylonitrile

Guideline level in food 0.02 mg/kg
